### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Thomas E. Donahue, Reg. No. 44,660, on 2 December 2005.

The application has been amended as follows:

#### **IN THE CLAIMS:**

Claim 18, Line 4: replace "contact" with -- communication --

### ***Drawings***

The drawings were received on 23 November 2005. These drawings are accepted.

### ***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance: The prior art teaches an imaging assembly, and the method for its use, requiring various elements including a controller, detector array, scintillator assembly, collimator, electroluminescent panel, and logic adapted to operate and calibrate said assembly. However, prior art fails to teach or fairly suggest an imaging assembly with an electroluminescent panel wherein said electroluminescent panel generates radiation

without receiving x-rays for the purpose of calibration, in the manner required by independent Claims 1, 13, and 18.

Claims 2-12, 14-17, and 19-21 are allowed based on their dependency upon Claims 1, 13, and 18, respectively.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Patent to Borner (USP# 5,698,858) teaches an electroluminescent panel used in an image intensifier screen for an x-ray detector apparatus, but does not teach that said electroluminescent panel is capable of generating radiation without incoming x-ray radiation, or that said electroluminescent light emitted is used for calibration purposes.

U.S. Patent to Shoji (USP# 6,539,076) teaches an electroluminescent panel used in an x-ray detector apparatus, but does not teach that said electroluminescent panel is capable of generating radiation without incoming x-ray radiation, or that said electroluminescent light emitted is used for calibration purposes.
